

Dear Doctor:

Your patient has chosen to fly with Dragonair or on an interline ticket associated with a Dragonair ticket.

At the time of the booking inquiry, the information provided to our Reservations office has prompted Dragonair to ask that you complete part 2 of the MEDA (Passenger Medical Clearance) form, and certify whether your patient is fit to fly. This form must be completed in full in English. Once the MEDA form has been completed, it should be returned to your local Dragonair Reservations office.

This assessment and completion of the form is carried out at your patient's expense, if there are any.

It is important that Dragonair receives the completed MEDA form no later than two full working days prior to your departure date. (Note: For flights departing from the United States., we are temporarily unable to support medical oxygen requests at this time but passengers may bring one of five FAA approved Portable Oxygen Concentrators. For details, please contact your local Dragonair Reservations office).

In an aircraft cabin, your patient will be exposed to the effects of air pressure changes, reduced oxygenation and humidity, turbulence and being in a confined area. Given that passengers are exposed to these special conditions during air travel, it is important that you consider your patient's medical status carefully before you complete the MEDA form. Additional information is available in the 'Medical Guidelines for Airline Travel' Second Edition which may be accessed through <http://www.asma.org/pdf/publications/medguid.pdf>

If you wish to discuss the case further with our Company Aviation Medical team, please contact your local Dragonair Reservations office as soon as possible.

Thank you for your cooperation.
